

Solution of the Spacewire exercise

$$1. D_{\text{eed}}(f_1) = D_{S1}(f_1) + D_A(f_1) + D_B(f_1) + TR(f_1)$$

$$\begin{aligned} D_{S1}(f_1) \\ &= D_{\text{eed}}(A \Rightarrow S2)(f_2) \\ &= D_A(f_2) + TR(f_2) \\ &= 0 + L(f_2)/C \end{aligned}$$

Since there is no packet at the router A waiting for the same output than f_2 , then its delay in the router A is null.

$$\begin{aligned} D_A(f_1) \\ &= \max(D_{\text{eed}}(A \Rightarrow S5)(f_3), D_{\text{eed}}(A \Rightarrow S4)(f_4)) \\ &= \max(D_B(f_3) + TR(f_3), D_B(f_4) + TR(f_4)) \\ &= \max(D_{\text{eed}}(B \Rightarrow S5)(f_6) + TR(f_3), D_{\text{eed}}(B \Rightarrow S4)(f_5) + TR(f_4)) \\ &= \max(0 + TR(f_6) + TR(f_3), 0 + TR(f_5) + TR(f_4)) \\ &= \max(L(f_6)/C + L(f_3)/C, L(f_5)/C + L(f_4)/C) \end{aligned}$$

There are f_3 and f_4 coming from the same input port and want to access the same output port than f_1 , thus we take the maximum of their end-to-end delays until arriving their final destination. Afterwards, we have f_3 , which can be blocked by flow f_6 ; whereas f_4 that can be delayed by flow f_5 . The flows f_5 and f_6 are the only flows asking for their corresponding outputs in router B; thus we count only their transmission times.

$$\begin{aligned} D_B(f_1) \\ &= D_{\text{eed}}(B \Rightarrow S3)(f_7) \\ &= TR(f_7) \\ &= L(f_7)/C \end{aligned}$$

There is only flow 7 waiting for the same output than f_1 in router B; thus the final result.

$$D_{\text{eed}}(f_1) = L(f_2)/C + \max(L(f_6)/C + L(f_3)/C, L(f_5)/C + L(f_4)/C) + L(f_7)/C + L(f_1)/C$$

$$2. D_{\text{eed}}(f_4) = D_{S2}(f_4) + D_A(f_4) + D_B(f_4) + TR(f_4)$$

$$\begin{aligned} D_{S2}(f_4) \\ &= D_{\text{eed}}(A \Rightarrow S5)(f_3) \\ &= D_A(f_3) + D_B(f_3) + TR(f_3) \\ &= D_{\text{eed}}(A \Rightarrow S3)(f_1) + D_{\text{eed}}(B \Rightarrow S5)(f_6) + TR(f_3) \end{aligned}$$

$$\begin{aligned}
&= D_B(f1) + TR(f1) + TR(f6) + TR(f3) \\
&= D_eed(B \Rightarrow S3)(f7) + TR(f1) + TR(f6) + TR(f3) \\
&= TR(f7) + TR(f1) + TR(f6) + TR(f3) \\
&= L(f7)/C + L(f1)/C + L(f6)/C + L(f3)/C
\end{aligned}$$

$$\begin{aligned}
D_A(f4) \\
&= D_eed(A \Rightarrow S3)(f1) \\
&= D_B(f1) + TR(f1) \\
&= D_eed(B \Rightarrow S3)(f7) + TR(f1) \\
&= TR(f7) + TR(f1) \\
&= L(f7)/C + L(f1)/C
\end{aligned}$$

$$\begin{aligned}
D_B(f4) \\
&= D_eed(B \Rightarrow S4)(f5) \\
&= TR(f5) \\
&= L(f5)/C
\end{aligned}$$

Hence ,

$$\begin{aligned}
D_eed(f4) \\
&= L(f7)/C + L(f1)/C + L(f6)/C + L(f3)/C + L(f7)/C + L(f1)/C + L(f5)/C + L(f4)/C
\end{aligned}$$

3. $D_eed(f7) = D_S4(f7) + D_B(f7) + TR(f7)$

$$\begin{aligned}
D_S4(f7) \\
&= D_eed(B \Rightarrow S5)(f6) \\
&= D_B(f3) + TR(f6) \\
&= L(f3)/C + L(f6)/C
\end{aligned}$$

$$\begin{aligned}
D_B(f7) \\
&= D_eed(B \Rightarrow S3)(f1) \\
&= TR(f1) \\
&= L(f1)/C
\end{aligned}$$

Hence,

$$D_eed(f7) = L(f3)/C + L(f6)/C + L(f1)/C + L(f7)/C$$
